

**DRIVE TRUE
CAR OF THE MONTH**
1981 DeLorean DMC-12
 The famous DeLorean car is a rare find indeed. Manufactured in Northern Ireland, DeLorean Motor Company only produced this beauty from 1981-1983. While we are reminiscent of the movie, Back to the Future, that made it world famous as a time machine, you can still see these babies driven around from time to time. Highly desirable at Car Shows, Auctions and by car enthusiast, the DeLorean is a fine addition to any car collection. Sporting stainless steel body panels and gull-wing doors, it is one of the most innovative car designs you will ever find. DMC only produced 9,200 vehicles, all with similar looks and only slight modifications to design. The DeLorean has been Drive True's mascot since our inception in 2011.

BUDGETING AUTOMOTIVE REPAIRS

New Year, new budget... new car repairs. As daunting as the cost of car repairs can be, we have a few tips to ensure you are ready for anything your car may throw your way.

Tip #1 : Have your vehicle inspected in January. While paying the hour labour right after the holidays may not be ideal, it could potentially save you hundreds in the long run. Have a complete inspection, along with a comprehensive quote, then have your mechanic break it down, listing Top Priority repairs first. Request a subtotal for each individual job to help you better plan.

Tip #2 : Know your maintenance. Maintenance includes services that keep your vehicle operating in the best possible conditions. Plan how many oil changes, tire rotations, etc. you will require throughout the year. Find out the price and include that into your budget.

Tip #3 : Break down your expected repairs into time slots. Expect X amount within the first 3 months, X amount by mid year and the remainder for the last half. If you can, allow some wiggle room for the unexpected.

TRICKS OF THE TRADE

To ensure the longevity of your brake rotors, we recommend to release heat build up. After coming to a complete stop, quickly release the brake, then immediately re-apply. Heat is the biggest contributor to premature wear and tear. Avoid doing if you are bumper to bumper or on a downward slope.
